Case study · GoHighLevel automation

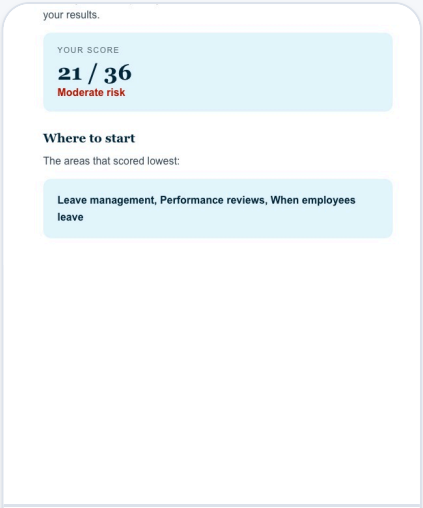

Turning a compliance consultancy's website into a lead engine

The client is an Australian consultancy that helps businesses with 50 to 500 staff manage compliance across HR, workplace safety, cyber security, quality and more. Alongside a full website redesign, I connected every call to action on the site to GoHighLevel, so each enquiry is captured, scored, followed up and tracked with no manual work.

8	5	12	44+	0
interactive health check tests	workflows designed (2 live, 1 in build)	branded HTML email templates	custom fields mapped	manual steps per lead

A visitor's results screen on the website

The results email that arrived seconds later

The brief

- **Capture intent, not just contact details:** visitors learn something about their own risk before they talk to anyone.
- **Respect a firm promise:** "we won't overwhelm you with immediate calls".
- **One clear view** of every enquiry for the sales team, whichever button it came from.

What I built

- **8 health check tests** in custom HTML, CSS and JavaScript inside the GHL page builder, with live scoring and a risk band.
- **Data model:** custom fields per test, a tag scheme and an 8-stage pipeline.
- **12 responsive HTML emails** using merge fields, so one template serves every test.
- **5 workflows** (full maps on the next pages).

Design principles

- **Keep the promise:** no auto-dialling or texts, at most one email every 2 days, and the team's task is to email first.
- **One source of truth:** one pipeline, forward-only stages, one opportunity per contact.
- **Sequences stop themselves** when a lead books or asks for a demo.
- **One endpoint, eight tests,** routed by a "test" key.

Problems solved

- **Prefill keys vs field keys:** mapped URL query keys to real field IDs instead of creating duplicates.
- **Contact vs team emails:** lead alerts sent as internal notifications, so they never reach the prospect.
- **AI-built drafts:** reviewed every generated step, fixing invented tags, swapped mappings and missing conditions.

System map

How the five workflows hand over to each other

Workflow 1 — Live

Health check completed

From: any of 8 tests (inbound webhook)

Does: saves results, tags interest and risk, sends the results email, alerts the team, starts 3 follow-ups

Moves to: Health Check Completed

Hands over: follow-ups stop when W2 or W3 adds "nurture: stop"

Workflow 2 — Live

Demo requested

From: demo form, pre-filled with the services picked on the site

Does: tags each module of interest, notes the selections, confirms, alerts, creates a task

Moves to: Demo Requested

Hands over: adds "nurture: stop" to end W1's follow-ups

Workflow 3 — In build

Review booked

From: either of 2 booking calendars

Does: confirms, alerts, sends reminders 24 h and 1 h before (skipped if cancelled)

Moves to: Review Booked

Hands over: adds "nurture: stop"; the outcome goes to W4

Workflow 4 — Planned

Review outcome

From: appointment status change

Does: showed: proposal task · no-show: reschedule email · cancelled: check-in task

Moves to: Review Held

Hands over: the team moves the deal to Proposal Sent, then Won

Workflow 5 — Planned

Won: start onboarding

From: opportunity moved to Won

Does: tags the new client, onboarding task, day-85 review reminder

Moves to: Won: Onboarding

Hands over: ongoing client management

Pipeline "Website Enquiries" New Enquiry → Health Check Completed → Demo Requested → Review Booked → Review Held → Proposal Sent → Won: Onboarding · Not Now

Tag scheme

- **Source:** src: health check · src: demo request · src: review booking · src: contact page
- **Test taken:** hc: cyber, qa, safety, hr, rtw, time, insure, iso
- **Risk:** risk: high · risk: medium · risk: low
- **Interest:** interest: hr, safety, cyber, qa, rtw, time, insurance, iso
- **Sequence control:** nurture: active · nurture: stop

Data captured per lead

- **Shared:** number of staff, industry, last test taken, its score, band, gaps, page and date
- **Per test (x8):** score, band, gaps, every answer, and the test's own extra questions
- **Demo requests:** every service selected, by module, saved as a contact note

Health check completed

Live and tested

TRIGGER — Inbound webhook
Any of 8 health checks submitted (one shared endpoint)

→ **ACTION** — Create or update contact
Name, company, staff, industry, last score, band, gaps, page

IF / ELSE — Which test? (webhook field "test")

Cyber	Quality	Safety	HR	Return to Work	Time & Att.	Insurance	ISO
ACTION Save Cyber results — Score, band, gaps, answers, extras	ACTION Save Quality results — Score, band, gaps, answers, extras	ACTION Save Safety results — Score, band, gaps, answers, extras	ACTION Save HR results — Score, band, gaps, answers, extras	ACTION Save Return to Work results — Score, band, gaps, answers, extras	ACTION Save Time & Att. results — Score, band, gaps, answers, extras	ACTION Save Insurance results — Score, band, gaps, answers, extras	ACTION Save ISO results — Score, band, gaps, answers, extras
ACTION Tags — hc: cyber · interest: cyber	ACTION Tags — hc: qa · interest: qa	ACTION Tags — hc: safety · interest: safety	ACTION Tags — hc: hr · interest: hr	ACTION Tags — hc: rtw · interest: rtw	ACTION Tags — hc: time · interest: time	ACTION Tags — hc: insure · interest: insurance	ACTION Tags — hc: iso · interest: iso

ACTION — Tags
src: health check · risk: high / medium / low

→ **PIPELINE** — Create or update opportunity
Stage "Health Check Completed" · forward-only · no duplicates

→ **TEAM** — Internal notification
Lead alert to the sales owner, with the full result

IF / ELSE — Risk level (webhook field "risk")

high	medium	low
EMAIL Results email: High → TASK Follow-up task — Email first, 1 business day	EMAIL Results email: Medium → TASK Follow-up task — Email first, 1 business day	EMAIL Results email: Low

CHECK — Already in sequence?
Yes: end · No: tag "nurture: active"

→ **WAIT** — Wait 2 days

→ **CHECK** — Stop if booked
or "nurture: stop"

→ **EMAIL** — Follow-up 1
What your gaps mean

→ **WAIT** — Wait 4 days

→ **CHECK** — Stop if booked
or "nurture: stop"

→ **EMAIL** — Follow-up 2
How onboarding works

→ **WAIT** — Wait 5 days

→ **CHECK** — Stop if booked
or "nurture: stop"

→ **EMAIL** — Follow-up 3
Last note

→ **ACTION** — Remove tag
"nurture: active"

→ END

Workflows 2 and 3 · full maps

Demo requests and review bookings

Workflow 2: Demo requested

Live and tested

TRIGGER Form submitted
Demo request form, opened with selections pre-ticked via URL query keys

ACTION Tag "src: demo request"

IF / ELSE For each module: any service ticked? (8 checks in a chain)

HR	Safety	Quality	Cyber	RTW	Time	ISO	Insurance
ACTION interest: hr if ticked	ACTION interest: safety if ticked	ACTION interest: qa if ticked	ACTION interest: cyber if ticked	ACTION interest: rtw if ticked	ACTION interest: time if ticked	ACTION interest: iso if ticked	ACTION interest: insurance if ticked

ACTION Tag "nurture: stop"
Ends the health check follow-ups

PIPELINE Create or update opportunity
Stage "Demo Requested" · forward-only

ACTION Contact note
Every selected service, listed by module

EMAIL Confirmation email
"We've got your selections"

TEAM Internal notification
Lead alert to the sales owner

TASK Task: arrange the demo
Email first, due in 1 business day

END

Workflow 3: Review booked

In build

TRIGGER Appointment booked
Two triggers: contact page calendar · services calendar

ACTION Tags
src: review booking · nurture: stop

IF / ELSE Which calendar?

- contact page → **ACTION** Tag "src: contact page"
- services page

PIPELINE Create or update opportunity
Stage "Review Booked" · forward-only · open

EMAIL Booking confirmation
Date, time, what to expect, reschedule link

TEAM Internal notification
Booking alert with date and time

IF / ELSE Cancelled or unavailable?

- yes → END
- no → **WAIT** Wait until 24 h before → **EMAIL** Reminder: tomorrow

IF / ELSE Cancelled or unavailable?

- yes → END
- no → **WAIT** Wait until 1 h before → **EMAIL** Reminder: starting soon

END

Workflows 4 and 5 · full maps

After the call: outcomes and onboarding

Workflow 4: Review outcome

Planned

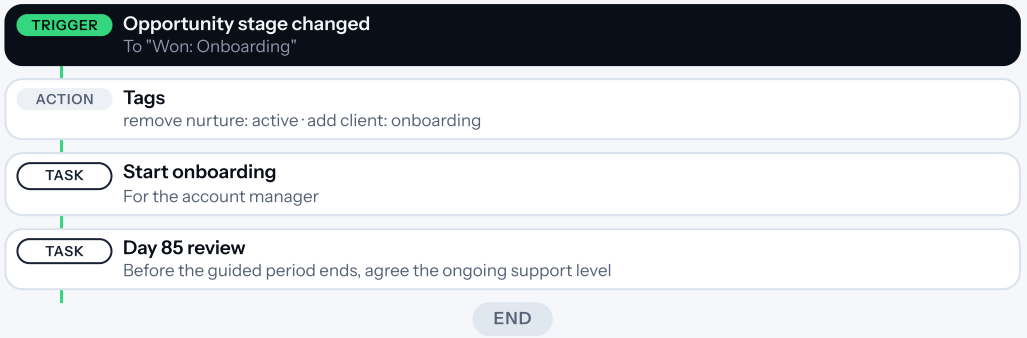

When the review call's status changes, the right next step happens automatically, so no lead is left waiting after a call.

Workflow 5: Won, start onboarding

Planned

When a deal is marked won, onboarding starts and the account manager is reminded to agree the ongoing support level before the guided period ends.
