Case study · GoHighLevel automation

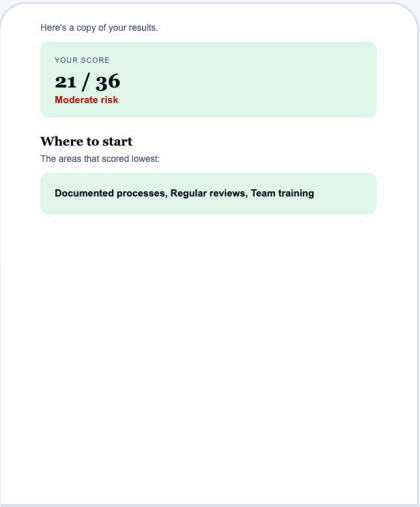

Turning a service business's website into a lead engine

The client is a B2B service business with several service lines. Alongside a full website redesign, I connected every call to action on the site to GoHighLevel, so each enquiry is captured, scored, followed up and tracked with no manual work.

8	5	12	44+	0
interactive self-assessments	workflows designed (2 live, 1 in build)	branded HTML email templates	custom fields mapped	manual steps per lead

A visitor's results screen on the website

The results email that arrived seconds later

The brief

- **Capture intent, not just contact details:** visitors learn where they stand before they talk to anyone.
- **No pushy follow-up:** enquiries get helpful emails, not immediate sales calls.
- **One clear view** of every enquiry for the sales team, whichever button it came from.

What I built

- **8 self-assessments** in custom HTML, CSS and JavaScript inside the GHL page builder, with live scoring and a risk band.
- **Data model:** custom fields per assessment, a tag scheme and an 8-stage pipeline.
- **12 responsive HTML emails** using merge fields, so one template serves every assessment.
- **5 workflows** (full maps on the next pages).

Design principles

- **Low pressure:** no auto-dialling or texts, at most one email every 2 days, and the team's task is to email first.
- **One source of truth:** one pipeline, forward-only stages, one opportunity per contact.
- **Sequences stop themselves** when a lead books or asks for a demo.
- **One endpoint, eight assessments,** routed by a "test" key.

Problems solved

- **Prefill keys vs field keys:** mapped URL query keys to real field IDs instead of creating duplicates.
- **Contact vs team emails:** lead alerts sent as internal notifications, so they never reach the prospect.
- **AI-built drafts:** reviewed every generated step, fixing invented tags, swapped mappings and missing conditions.

System map

How the five workflows hand over to each other

Workflow 1 — Live

Assessment completed

From: any of 8 assessments (inbound webhook)

Does: saves results, tags interest and risk, sends the results email, alerts the team, starts 3 follow-ups

Moves to: Assessment Completed

Hands over: follow-ups stop when W2 or W3 adds "nurture: stop"

Workflow 2 — Live

Demo requested

From: demo form, pre-filled with the services picked on the site

Does: tags each module of interest, notes the selections, confirms, alerts, creates a task

Moves to: Demo Requested

Hands over: adds "nurture: stop" to end W1's follow-ups

Workflow 3 — In build

Review booked

From: either of 2 booking calendars

Does: confirms, alerts, sends reminders 24 h and 1 h before (skipped if cancelled)

Moves to: Review Booked

Hands over: adds "nurture: stop"; the outcome goes to W4

Workflow 4 — Planned

Review outcome

From: appointment status change

Does: showed: proposal task · no-show: reschedule email · cancelled: check-in task

Moves to: Review Held

Hands over: the team moves the deal to Proposal Sent, then Won

Workflow 5 — Planned

Won: start onboarding

From: opportunity moved to Won

Does: tags the new client, onboarding task, day-85 review reminder

Moves to: Won: Onboarding

Hands over: ongoing client management

Pipeline "Website Enquiries" New Enquiry → Assessment Completed → Demo Requested → Review Booked → Review Held → Proposal Sent → Won: Onboarding · Not Now

Tag scheme

- **Source:** src: assessment · src: demo request · src: review booking · src: contact page
- **Assessment taken:** quiz: a1 to a8
- **Risk:** risk: high · risk: medium · risk: low
- **Interest:** interest: a1 to a8, one per service line
- **Sequence control:** nurture: active · nurture: stop

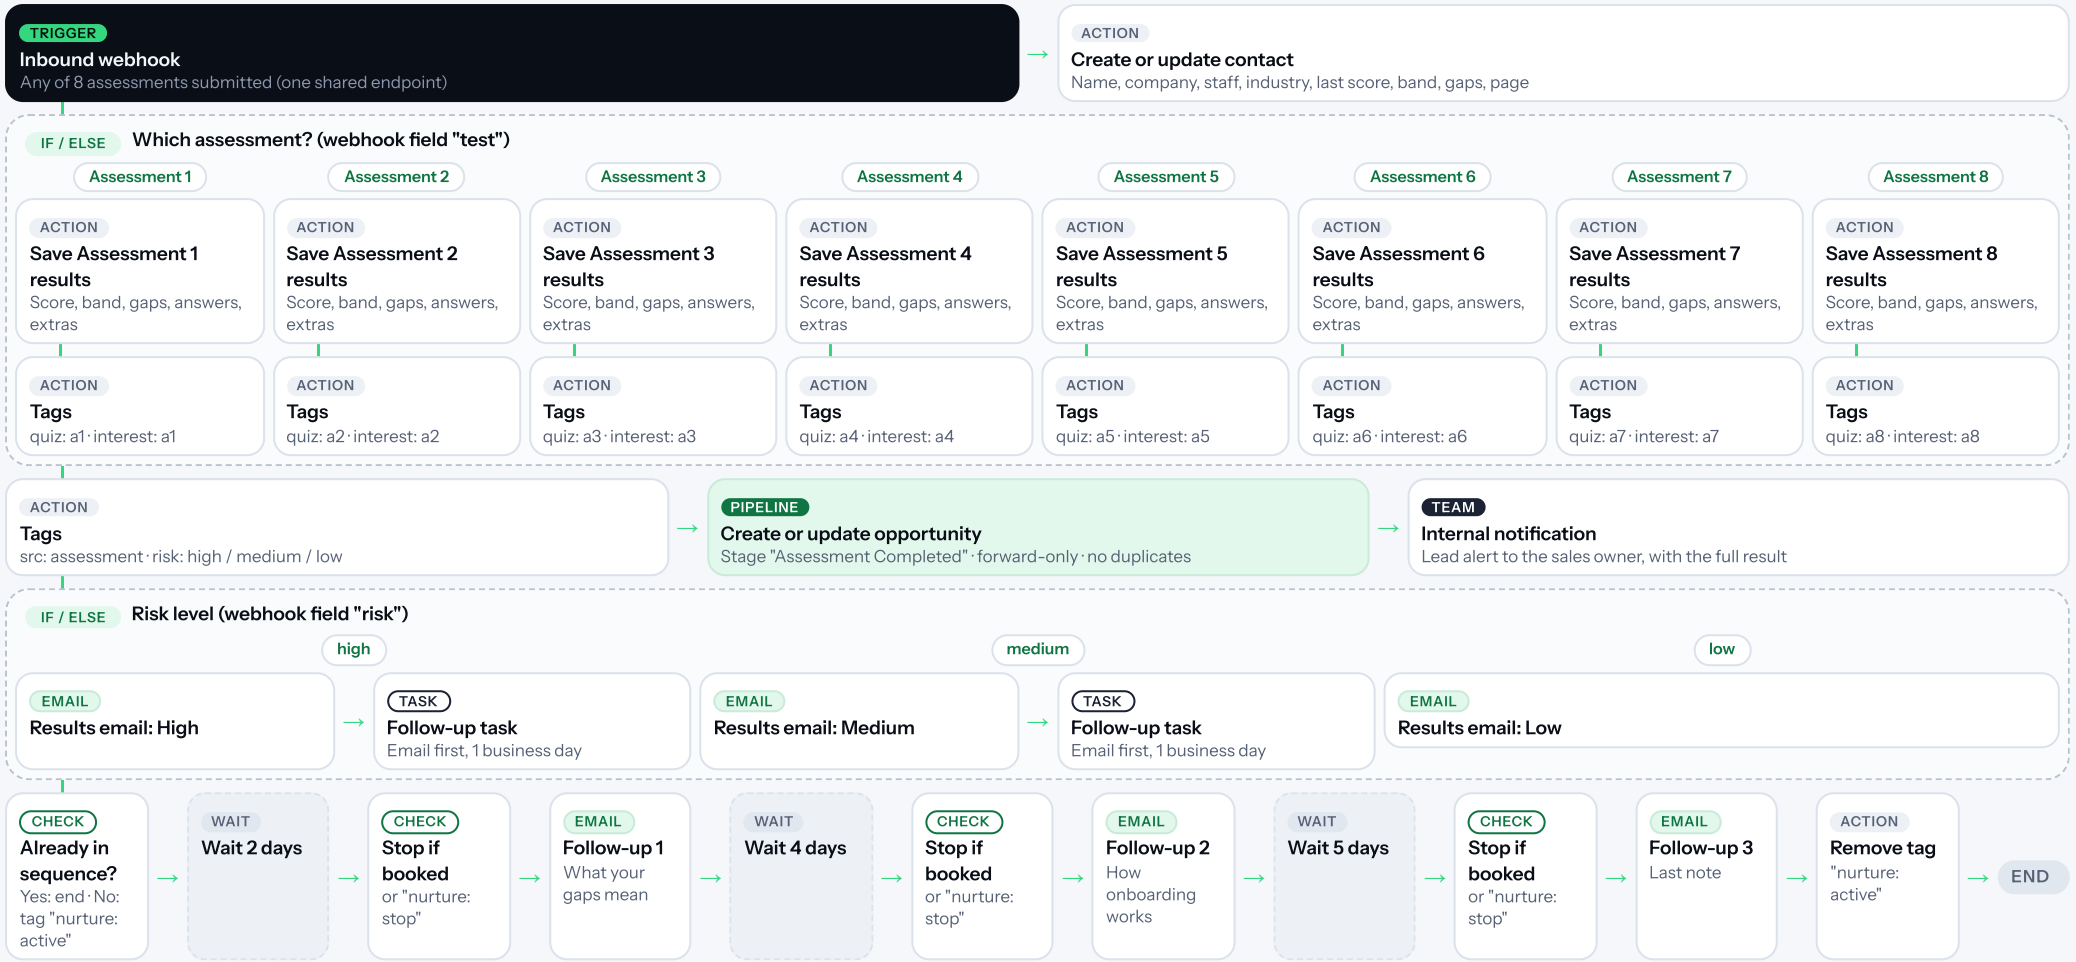

Data captured per lead

- **Shared:** number of staff, industry, last assessment taken, its score, band, gaps, page and date
- **Per assessment (x8):** score, band, gaps, every answer, and its own extra questions
- **Demo requests:** every service selected, by module, saved as a contact note

Assessment completed

Live and tested

TRIGGER Trigger · ACTION Action · PIPELINE Pipeline · EMAIL Email to lead · TEAM Team alert · TASK Task · WAIT Wait · CHECK Check

Workflows 2 and 3 · full maps

Demo requests and review bookings

Workflow 2: Demo requested

Live and tested

TRIGGER Form submitted
Demo request form, opened with selections pre-ticked via URL query keys

ACTION Tag "src: demo request"

IF / ELSE For each module: any service ticked? (8 checks in a chain)

Service 1	Service 2	Service 3	Service 4	Service 5	Service 6	Service 7	Service 8
ACTION interest: a1 if ticked	ACTION interest: a2 if ticked	ACTION interest: a3 if ticked	ACTION interest: a4 if ticked	ACTION interest: a5 if ticked	ACTION interest: a6 if ticked	ACTION interest: a7 if ticked	ACTION interest: a8 if ticked

ACTION Tag "nurture: stop"
Ends the assessment follow-ups

PIPELINE Create or update opportunity
Stage "Demo Requested" · forward-only

ACTION Contact note
Every selected service, listed by module

EMAIL Confirmation email
"We've got your selections"

TEAM Internal notification
Lead alert to the sales owner

TASK Task: arrange the demo
Email first, due in 1 business day

END

Workflow 3: Review booked

In build

TRIGGER Appointment booked
Two triggers: contact page calendar · services calendar

ACTION Tags
src: review booking · nurture: stop

IF / ELSE Which calendar?

- contact page → **ACTION** Tag "src: contact page"
- services page

PIPELINE Create or update opportunity
Stage "Review Booked" · forward-only · open

EMAIL Booking confirmation
Date, time, what to expect, reschedule link

TEAM Internal notification
Booking alert with date and time

IF / ELSE Cancelled or unavailable?

- yes → END
- no → **WAIT** Wait until 24 h before → **EMAIL** Reminder: tomorrow

IF / ELSE Cancelled or unavailable?

- yes → END
- no → **WAIT** Wait until 1 h before → **EMAIL** Reminder: starting soon

END

Workflows 4 and 5 · full maps

After the call: outcomes and onboarding

Workflow 4: Review outcome

Planned

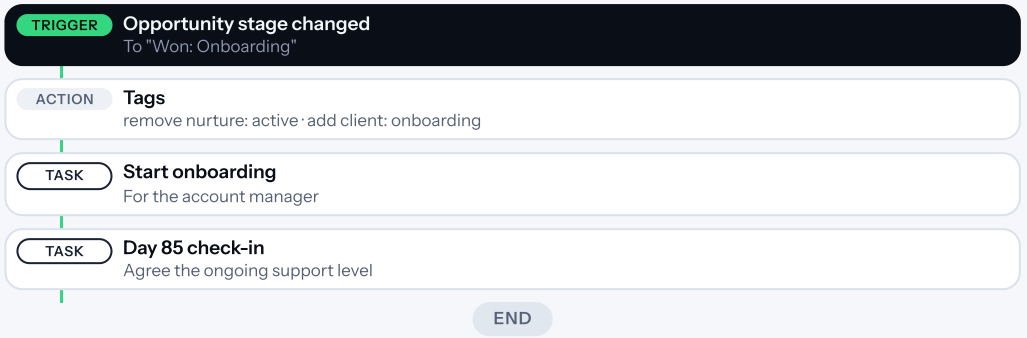

When the review call's status changes, the right next step happens automatically, so no lead is left waiting after a call.

Workflow 5: Won, start onboarding

Planned

When a deal is marked won, onboarding starts and the account manager is reminded to agree the ongoing support level.
